

On the Subject of The Labyrinth

It's like a maze, only spelt differently.

- The module shows the first layer of a 5-layer labyrinth.
- To disarm the module, ascend to the fifth layer and then back down to the first, moving between layers using one of the two orange portals.
- The current location is marked in green.
- The defuser cannot see the walls of the maze.
- Moving onto a portal will move you to the next layer.
- The portals will not be visible during the descent but will be in the same location as during the ascent.
- Touching a wall will cause a strike and briefly display the maze's walls.
- Touching a wall during the descent will briefly display the portals.
